

Noti & WHMCS Integration

This module will notify you each time a client signs up, pays an invoice or opens a support ticket in WHMCS.

Installation

To install you need to download the files within the repo and upload them to;

```
WHMCS_ROOT/modules/addons/noti
```

Once the files have successfully uploaded navigate to the WHMCS administration area and click (Setup > Addon Modules)

Here you will see a list of modules that have been uploaded, within this list you will see Noti. Click the 'Activate' link to begin setting up the module.

Noti API Key This must be generated by visiting <https://notiapp.com/apps> and creating an app.

Configuration

Once the module has been installed each administrator will need to login to WHMCS (Addons > Desktop Notifications with Noti) and Setup Noti by following the instructions.
